1. Risk factors

All investments in interest bearing securities have risk associated with such investment. The risk is related to the general volatility in the market for such securities, varying liquidity in a single bond issue as well as company specific risk factors. An investment in interest bearing securities is only suitable for investors who understand the risk factors associated with this type of investments and who can afford a loss of all or part of the investment. Please refer to the Registration Document dated 08.04 2015 for a listing of company specific risk factors.

There are five main risk factors that sums up the investors total risk exposure when investing in interest bearing securities: **liquidity risk, interest rate risk, settlement risk, credit risk and market risk** (both in general and issuer specific).

Liquidity risk

The liquidity of the trading market in the Bonds, and the market price quoted for the Bonds, may be adversely affected by changes in the overall market for similar yield securities, interest rates and the Issuer's financial performance or prospects or in the prospects for companies in its industry generally. As a result, an active trading market for the Bonds may not develop or be maintained. Historically, the markets for non-investment grade debt, such as the Bonds, have been subject to disruptions that have caused substantial volatility in their prices. Any market for the Bonds may be subject to similar disruptions. Any such disruptions may affect the liquidity and trading of the Bonds independently of the Issuer's financial performance and prospects and may have an adverse effect on the holders of the Bonds. No market-maker agreement is entered into in relation to this bond issue, and the liquidity of bonds will at all times depend on the market participants view of the credit quality of the Issuer as well as established and available credit lines.

Interest rate risk is the risk borne by the Loan due to variability of the NIBOR interest rate. The coupon payments, which depend on the NIBOR interest rate and the Margin, will vary in accordance with the variability of the NIBOR interest rate. The interest rate risk related to this bond issue will be limited, since the coupon rate will be adjusted quarterly according to the change in the reference interest rate (NIBOR 3 months) over the 3 year tenor. The primary price risk for a floating rate bond issue will be related to the market view of the correct trading level for the credit spread related to the bond issue at a certain time during the tenor, compared with the credit margin the bond issue is carrying. A possible increase in the credit spread trading level relative to the coupon defined credit margin may relate to general changes in the market conditions and/or Issuer specific circumstances. However, under normal market circumstances the anticipated tradable credit spread will fall as the duration of the bond issue becomes shorter. In general, the price of bonds will fall when the credit spread in the market increases, and conversely the bond price will increase when the market spread decreases.

Settlement risk is the risk that the settlement of bonds in the Loan does not take place as agreed. The settlement risk consists of the failure to pay or the failure to deliver the bonds.

Credit risk is the risk that the Borrower fails to make the required payments under the Loan (either principal or interest).

Market risk is the risk that the value of the Loan will decrease due to the change in value of the market risk factors. The price of a single bond issue will fluctuate in accordance with the interest rate and credit markets in general, the market view of the credit risk of that particular bond issue, and the liquidity of this bond issue in the market. In spite of an underlying positive development in the Issuers business activities, the price of a bond may fall independent of this fact. Bond issues with a relatively short tenor and a floating rate coupon rate do however in general carry a lower price risk compared to loans with a longer tenor and/or with a fixed coupon rate.

No market-maker agreement is entered into in relation to this bond issue, and the liquidity of bonds will at all times depend on the market participants view of the credit quality of the Issuer as well as established and available credit lines.

Ranking of the Bonds

The Bonds constitute senior unsecured obligations of the Issuer. As such, the Bonds are effectively subordinated to the secured debt and any debt of the Issuer's subsidiaries outstanding from time

to time. The Bonds rank equally in right of payment with the Issuer's senior unsecured debt outstanding from time to time and senior in right of payment to the Issuer subordinated debt (if any) outstanding from time to time. The secured creditors of the Issuer will have priority over the assets securing their debt. In the event that such secured debt becomes due or a secured lender proceeds against the assets that secure the debt, the assets would be available to satisfy obligations under the secured debt before any payment would be made on the Bonds. Any assets remaining after repayment of its secured debt may not be sufficient to repay all amounts owing under the Bonds.

	The applicable Floating Rate on the Bonds is set/reset on each Interest Payment Date by the Bond Trustee commencing on the Interest Payment Date at the beginning of the relevant calculation period, based on the Bond Reference Rate two Business Days preceding that Interest Payment Date.
NIBOR:	The interest rate fixed for a defined period on Oslo Børs'

webpage at approximately 12.15 Oslo time or, on days on which Oslo Børs has shorter opening hours (New Year's Eve and the Wednesday before Maundy Thursday), the data published at approximately 10.15 a.m. shall be used. In the event that such page is not available, has been removed or changed such that the quoted interest rate no longer represents, in the opinion of the Bond Trustee, a correct expression of the relevant interest rate, an alternative page or other electronic source which in the opinion of the Bond Trustee and the Issuer gives the same interest rate shall be used. As the Bonds have a floating reference rate, it is the market's expectations of risk premium, i.e. margin that affects the price. If the price has increased, the yield for the purchaser in the secondary market, given that the reference rate does not change, will be lower than the interest rate of the Bonds and vice versa. At par and an assumption that the reference rate is 1.75% from the issue date to maturity date, the yield will be 5.50%.

Such notification shall be given as soon as possible after a Change of Control Event or a De-Listing Event has taken place.

	<p>The Put Option may be exercised by each Bondholder by giving written notice of the request to its Account Manager. The Account Manager shall notify the Paying Agent of the redemption request. The settlement date of the Put Option shall be the third Business Day after the end of the two month exercise period of the Put Option.</p> <p>On the settlement date of the Put Option, the Issuer shall pay to each of the Bondholders holding Bonds to be redeemed, the principal amount of each such Bond (including any premium pursuant to the Bond Agreement Clause 10.2.1) and any unpaid interest accrued up to (but not including) the settlement date.</p>
